

AI-First Accelerator

The fast track to innovation

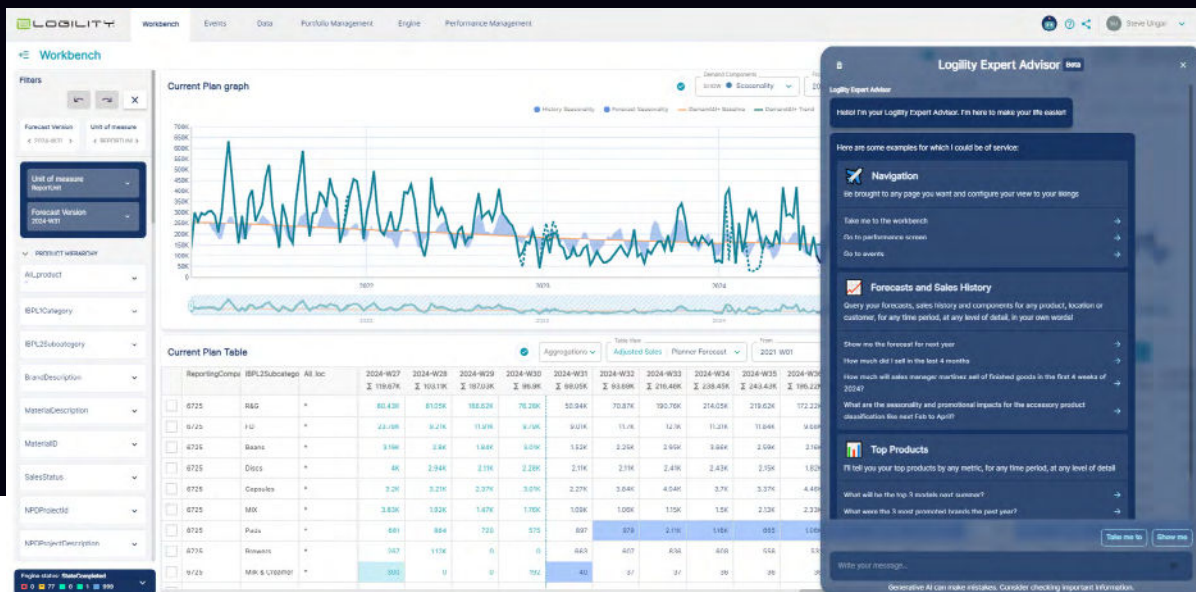

Move from what happened to what's coming

Supply chain management has long used the past to predict the future for one simple reason – there wasn't a better way to do it. Technologies like AI, Machine Learning, and Generative AI have changed the game. Logility's AI-first approach lets you move from a "what happened" view of the world to one that prepares you for what's coming. Organizations that act now have an opportunity to establish a competitive foothold by seeing and capitalizing on what others miss.

Logility's AI-First Accelerator package is designed to let you take advantage of transformational technologies as quickly and easily as possible. Rapid implementation delivers rapid time to value, while also positioning you to seize new opportunities created by technologies that are advancing at breakneck speed. The time to act is now.

Take the fast track to innovation

The Logility AI-Accelerator package consists of three key components that work together to remove subjectivity from your planning processes, elevate human decision making with AI-powered insights, break down silos, and drive better supply chain outcomes. You can transform key processes and quickly realize tangible, measurable results. The package includes:

DemandAI+ Dramatically improve forecast accuracy

DemandAI+ is a cloud-based demand planning solution that captures events in real time and connects that information to the peaks and valleys of demand. Information is immediately available, routine work is automated, and emotion is replaced by insights. The result is a shared digital language that provides transparency, powers collaboration, and dramatically improves forecast accuracy.

- Increase forecast accuracy by 10% to 30%
- Decrease work hours to create a plan by up to 60%
- Create a shared digital language

LEA – Logility Expert Advisor Get answers in seconds

Powered by GenAI and trained on your organization's unique data, LEA is an on-demand assistant that puts information at the fingertips of any supply chain stakeholder. Just ask a question using LEA's conversational interface, and you'll have the answer – enriched by additional insights and data – in seconds. No data scientists required.

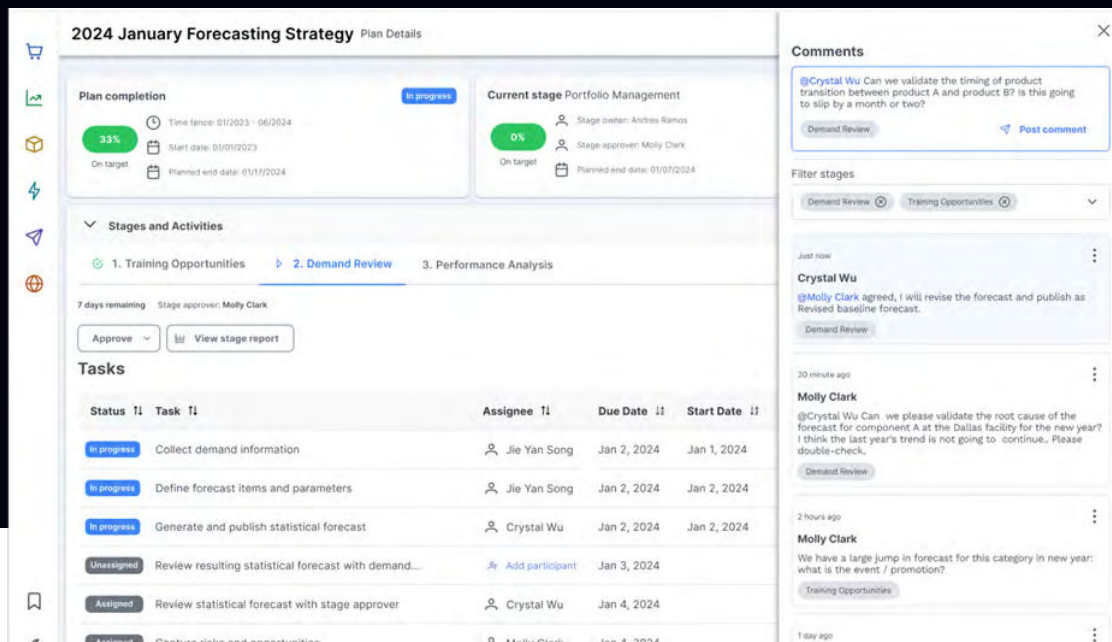

- Get answers in seconds
- Quickly understand demand and supply imbalance causality
- Make real-time supply chain adjustments

Decision Command Center

Decision Command Center is a collaboration and workflow tool that powers high-quality, cross-functional, end-to-end decision making. Going beyond basic workflows to fully integrate processes as defined by you, it enhances visibility, facilitates understanding of supply chain implications, and drives greater strategic and operational alignment.

- Streamline AI-driven planning processes with a single system of record
- Foster cross-functional collaboration
- Elevate and accelerate decision-making

Fully orchestrate your end-to-end planning process

The time to act is now

Supply chain technologies are advancing at a rate that will make us look back in astonishment at the way things used to be. The window of opportunity is open, and the time to act is now.

“Logility has an above average vision for AI, as well as speed and scalability, compared to other vendors in this Magic Quadrant, supporting graph technologies, Generative AI, and other AI/ML techniques.”

– 2024 Gartner Magic Quadrant for Supply Chain Planning

About Logility

Logility’s AI-first supply chain management solutions help organizations build sustainable digital supply chains that improve people’s lives and the world we live in. Our fully integrated, end-to-end platform helps clients know faster, turn uncertainty into opportunity, and transform their supply chain into an engine for growth. We are proud to support more than 550 clients worldwide.
